Design feedback response

I respect all of Rick's review of my program I have taken his review and compiled it into these items to make changes to:

- Remove the option to disable box on main page
 - On the original proposal I did not notice that I had the option to disable any item with in my program. I will reconsider this option to remove the option to “disable”.
- Show the option for the allergies input on main page
 - This one here is more of a note to self. I will allow the user to put any allergies when the student information is entered into the database. This will give the option of the most common allergies and the option to manual add
- Find a way to reformat the schema so it will work if growth takes place at a later time
 - I will make sure my databases have the room for growth. One of the hardest thing to do is to expand a database when it has been in operation for a while and you need it to be changed because of current growth.
